What is Serverles?

Building Microservice REST APIs using Azure Functions

Building Microservice

On-Premises

What media should !nar uneque packups;

What size of servers should I buy?

How do I deploy new code to my servers?

How can I scale my app?

Which packages should be on my server?

Do I need a secondary Network connection?

How many

Who has physical access my servers? Who monitors my servers?

servers do I need?

Do I need a UPS?

It takes how long to provision a new server?

What happens in case of server hardware failure?

Who monitors wh abbes;

How often should I backup my server?

Are my servers in a secure location?

How can I increase

server utilization?

How do I keep the operating system up to date?

> What happens in case of server hardware failure?

How often should I patch my severs?

What storage do I need to use?

How can I dynamically configure my app?

laaS

What media should I nar uneque packups;

What size of servers should I buy?

What happens in case of What is the right size of servers for myseusiness needs? case of hardware failure? How can I scale more to my busines how code to my busines have server utilization?

How can I scale my appracation?

my apps?

Which packages should be on my server?

server utilization? How often should I backup my server?

Serverless Microservice REST API Demo

Building Microservice REST APIs Using Azure Functions

Building Microservice

Avoid long running functions

Avoid cross functional communication

Write functions to be stateless

Organize functions for performance and scaling

Share and manage connections

Avoid sharing storage accounts

Use async code but avoid blocking calls
